

Course Overview

Our confined space and CPR training course covers the skills and knowledge required for safe entry to confined spaces under a work permit and for maintaining safety while working in the confined space. It also provides the learner with the theoretical knowledge and practical skills that are required to respond to an unconscious, nonbreathing person.

Participants are guided through recognition of typical hazardous conditions relating to confined spaces including; oxygen depletion, combustible atmospheres and atmospheric contaminants. Armed with the knowledge to identify potential hazards, participants learn how to assess a task, control the hazards and develop and implement safe work practices.

Learners also cover duties of confined space operators, standby personnel and rescue crews are presented in a combination of classroom and practical activities; leading to an assessment and entry of a confined space under controlled conditions, which is followed by a simulated rescue. Participants are encouraged throughout the program to develop, participate and apply skills in the safe management of confined spaces; from identification and planning through to execution and completion of confined space activities.

Employees should receive training in Confined Spaces and CPR if they:

- Design, modify or conduct works on or in confined spaces;
- Are involved in processes to identify or conduct risk assessments on confined spaces;
- Enter or work within confined spaces;
- Undertake the role of the standby person;
- Participate in confined space rescue or emergency procedures;
- Manage or supervise employees or contractors entering confined spaces;
- Work in high risk environments.

Subjects Covered

- Legislation
- Hazard Awareness
- Respiratory Protection
- Gas Detection & Atmospheric Monitoring
- Equipment
- Cardiopulmonary Resuscitation
- Safe Work Practices
- Rescue & Emergency Procedures

Refresher Training

Industry recommends that refresher training for Confined Space Entry should be completed every two years.

In line with the Australian Resuscitation Council (ARC) Guidelines Cardiopulmonary Resuscitation (CPR) must be refreshed annually.

Duration: 2 Day

Group Size: 1-12

Location: This course can be trained at our Training Facility or at your workplace.

Certification

As we are a Registered Training Organisation (RTO) our participants will be awarded a Nationally recognised Statement of Attainment on the successful completion of the training and assessment for this course.

The unit of competency covered in this course is:

MSMPER200 Work in accordance with an issued permit

(this unit is a pre-requisite for MSMPER205)

MSMPER205 Enter confined space

MSMWHS100 Follow WHS procedures

HLTAID001 Provide cardiopulmonary resuscitation
